D1 : US 5508748 A

The present invention relates to digital television transmitter and receiver for using 16 state trellis coding. It is characteristic of transmitting and receiving a double stream formed of normal data following 8-VSB method, and robust data obtained after 16-state trellis coding.

The prior arts, in the description, WO 02/080559, WO 02/100026 and US 2002/019470, show a double stream method, but a 2-VSB or a 4-VSB mode is applied to robust data. D1 mentions a multilevel VSB transmission and reception system, but a dual stream structure, like this invention, is not suggested. Therefore, the invention, as in the claims 1-24, is considered to involve a novelty and an inventive step.
